

Project Title: Industrial CRM (Customer Relationship Management System)

Definition:

Industrial CRM is a web-based Customer Relationship Management system designed to manage industrial business operations such as customer records, products, quotations, and orders in a simple and organized way.

The system helps businesses store customer information, manage product details, create quotations automatically, calculate prices and totals, and maintain sales-related records digitally.

It reduces manual paperwork, improves data management, and provides a centralized platform for managing customer and sales activities.

Main Objective:

The main objective of this project is to develop a digital system that helps industrial companies manage their customers, products, quotations, and future orders efficiently.

Technology Used:

- Frontend: HTML, CSS, JavaScript
- Backend: PHP
- Database: MySQL
- Server: WAMP Server

Modules:

1. Login & User Management
2. Dashboard
3. Customer Management
4. Product Management
5. Quotation Management
6. Order Management
7. Invoice & Reporting (Future Enhancement)
